※3 ND (Not detectable)： "Detection Limit" refers to the minimum detectable value. Radioactivity has the property wherein even using the same measurement device, the minimum level varies with the sample being measured. For example, a result of "ND (Detection Limit 6)" at X Purification Plant on a specific date means that the minimum measurement for that day's sample was 6 Bq/kg, but the concentration of radioactive particles in the sample was less than 6 Bq/kg. Cases such as this are listed in the above chart as "ND".

※4 We had originally focused on quick announcements of radiation level of purified water. Under the condition with the radiation level remaining low, however, our focus has been shifted to both quick announcements and the precision of the measurement to indicate more precise lower values by extending the testing period, starting April 15th, 2011. With this shift, previously used "ND means less than 20Bq/kg" is now accompanied with lowest measurable value. The detailed values indicated for April 1st to April 14th, 2011 are reference values tested and officially informed by Tokyo Metropolitan Industrial Technology Research Institute.
