We specialize in machines and tools for installing and maintaining the lifelines of modern communities.

Osaki Precision Co., Ltd was founded in 1948. Since then, for the last 70 over years, we have been supporting people's modern way of life by supplying equipment and tools for plumbing engineering. Our hard work has secured us an ever-increasing share of business, and indeed the highest share, in this field in Japan. We are highly regarded by the waterworks departments of local governments, and by city gas supplier and plumbing companies.

OSAKI Drilling Machines

You can do the plumbing work with no needs to stop water supply by using our drilling machines. This method of the tapping works under water supply is major in Japan , and it is called **“Hot Tapping” method**.

There are many merits of the “Hot Tapping” method , like below :

- Time shortening of the plumbing works.
- Reduction of the working cost.
- The cutting waste is completely removed out by the special mechanism of the Osaki drill.

So, no necessary to cleaning inside of pipe after tapping works. It means that small cutting chips and waste will not drop into the pipe.

- No necessary to announcement and arrangement of water supply truck.
- etc.
